Tips to REDUCE BRUSH LAG in Photoshop:
1. Increase PS's Memory Usage
2. Set Drawing Mode to 'Basic'
3. Use external drive for Scratch Disc

**History & Cache**

Optimize Cache Levels and Tile Size for:

Web / UI Design

Default / Photos

Huge Pixel Dimensions

**Advanced Graphics Processor Settings**

Drawing Mode: Basic

This mode uses the least amount of graphics processor memory and the most basic OpenGL features. Use this mode if the Normal and Advanced modes seem to be less smooth in their performance. This can happen if you routinely run other programs that occupy graphics processor memory.
